## Storm Data and Unusual Weather Phenomena - June 2010

| Location   | Date/Time          | Deaths & Injuries | Property & Crop Dmg | Event Type and Details                |
|--|--------------------|-------------------|---------------------|---------------------------------------|
| <p>Shortly after the Magnolia, IL tornado lifted, the same supercell thunderstorm went on to produce another tornado near the Marshall and LaSalle County line. National Weather Service damage survey teams found the damage from this tornado began just west of 2900 E Road and about one quarter mile south of 1250 N Road, or N 12th Road, which is the road that marks the county line. The tornado crossed north of 1250 N Road at Interstate 39. See Stormdata for Illinois, Central for the beginning of this tornado.</p> <p>This tornado continued eastward tracking along and just north of 12th Road, producing primarily EF0 to EF1 intensity damage, largely in the form of downed trees, power lines, and very minor structural damage.</p> <p>After the tornado moved past E 9th Road, the damage became more sporadic, which corresponded with spotter and storm chasers who reported that the tornado was not continuously on the ground before it reached Streator. Damage became more consistent again as the tornado moved east of E 12th Road, remaining just north of N 12th Road. The tornado appears to have remained on the ground from this point east into the city of Streator. The damage from E 9th Road east to E 15th Road was rated EF0 intensity and consisted primarily of minor tree damage.</p> <p>The tornado appears to have intensified as it moved into the city of Streator with EF2 intensity damage near the Eagle Pass subdivision where there was significant tree damage, along with portions of roofs removed from well built single family homes. The tornado continued eastward across southern portions of the city of Streator, damaging numerous homes and completely destroying several homes. Some of the most intense damage in Streator occurred along Hall Street and near Southside Athletic Park, where damage was rated higher end EF2. The most intense damage occurred through an approximately one quarter mile wide path through the city of Streator.</p> <p>Twenty one homes were uninhabitable and had to be destroyed. Another 33 homes were uninhabitable and had to undergo major repair. Another 150 homes had some degree of damage.</p> <p>A few businesses were also damaged including the Engle Lane Theater, an auto salvage business, an auto repair shop, and a landscape and nursery business.</p> <p>The tornado then continued eastward out of the city of Streator producing additional EF0 to EF1 intensity damage just north of the Livingston and LaSalle county border. The tornado appears to have jogged slightly southward before lifting near the county line, just to the west of E 22nd Road.</p> |                    |                   |                     |                                       |
| <hr/>  |                    |                   |                     |                                       |
| <b>LA SALLE COUNTY --- 0.9 SSW ALTMAR [41.12, -88.88], 0.9 S ALTMAR [41.12, -88.88]</b>  |                    |                   |                     |                                       |
|  | 06/05/10 19:50 CST |                   | 0                   | Tornado (EF0, L: 0.15 mi , W: 20 yd)  |
|  | 06/05/10 19:51 CST |                   | 0                   | Source: Storm Chaser                  |
| <p>Spotters and chasers witnessed a brief secondary tornado near Streator, in a field just south of Illinois Route 18, between County Roads 14 and 15, about 1/2 mile north of the main Streator tornado track. They observed a brief dust whirl on the ground beneath the funnel cloud, but it was over an open field and there was no damage.</p>  |                    |                   |                     |                                       |
| <hr/>  |                    |                   |                     |                                       |
| <b>LIVINGSTON COUNTY --- 1.0 E MISSAL [41.10, -88.73], 0.9 NNE NEVADA [41.09, -88.57]</b>  |                    |                   |                     |                                       |
|  | 06/05/10 19:58 CST |                   | 0.75M               | Tornado (EF3, L: 8.55 mi , W: 440 yd) |
|  | 06/05/10 20:10 CST |                   | 0                   | Source: NWS Storm Survey              |
| <p>Very quickly after the tornado that hit Streator lifted, yet another tornado touched down over extreme northern Livingston county approximately one quarter mile south of the county line and about a half mile west of 1100 E Road. Shortly after touching down, this tornado caused severe damage to homes on 1100 E Road and destroyed a barn as well. There were also several large trees downed in this location. As the tornado continued eastward, it completely collapsed a metal truss high tension electrical tower and bent over several other metal truss electrical towers in its path, which is consistent with low end EF3 damage. At this time the tornado was moving through an extremely rural area, however there was also a lone hardwood tree in its path that was debarked, with only large de-leafed branches remaining.</p> <p>The tornado continued eastward crossing Illinois Route 170 just south of the LaSalle and Livingston county line where hardwood trees were snapped. Large trees were broken at a farm house and a machine shed and grain bins were destroyed. The tornado then moved eastward for several more miles downing multiple trees and resulting in some minor structural damage between 1700 E Road and 1800 E Road.</p>  |                    |                   |                     |                                       |

## Storm Data and Unusual Weather Phenomena - June 2010

| Location  | Date/Time          | Deaths & Injuries | Property & Crop Dmg | Event Type and Details               |
|---|--------------------|-------------------|---------------------|--------------------------------------|
| <p>The beginning of the Dwight tornado occurred about 6 miles west of Dwight and about a quarter mile south of IL Route 17. On N 2200 E Road, 0.3 miles south of IL Route 17, a farm house sustained damage to windows, siding, and shingles, with many trees uprooted or damaged. Outbuildings were also damaged. The tornado at this point was rated EF1, with a path width of 70 yards. Debris from this farm was spread 200 yards wide across the field at N 2300E Road.</p>  |                    |                   |                     |                                      |
| <p>The tornado proceeded to strike the golf course at N 2400 E Road, where numerous large trees were snapped and uprooted. Golf cart sheds were unroofed or severely damaged. At this point the tornado was rated low end EF2 with a path width of 300 yards. The tornado then moved east across Interstate 55 and moved into Dwight, damaging a lumber yard and other businesses. At Williams Street and old Route 66 a mobile home park was hit. Fourteen people were injured. One person who was seriously injured, later died. At the mobile home park, 35 mobile homes were destroyed. Damage here was rated EF2. Large trees were uprooted and power poles were snapped at the railroad tracks. At a ball field a little farther east, trees and fences were damaged and an announcer's booth was destroyed. Slightly farther east, there was minor damage to a church, but the church's garage was destroyed. There was damage to the high school auditorium roof and facade, and a greenhouse. A storage garage was destroyed at the high school.</p> |                    |                   |                     |                                      |
| <p>The tornado then continued east into a subdivision between Philmar Street and Prospect Avenue, where many large trees were downed on top of homes. At Sunset Drive and Wilmac Street a garage door and roof were taken off. A roof was taken off a house on Linden Street a half block west of Il Route 47. Three houses were uninhabitable and had to be destroyed. More than 100 homes had some damage. Damage in Dwight was rated high end EF1 to low end EF2. The tornado dissipated in an open field east of Route 47.</p>  |                    |                   |                     |                                      |

| <p>A secondary tornado occurred 3 miles northwest of Dwight in northern Livingston County. The tornado began near the intersection of Rd 3300N and 2300E, where it caused minor damage to a home and surrounding trees. The tornado continued to the southeast where it derailed a train off its tracks near 2400E Road. At this point, the tornado moved east causing minor damage to some area trees before crossing Interstate 55, where it then lifted. The tornado was rated EF0 with winds estimated at around 80 mph and a path width of 20 yards.</p>   |                    |                   |                     |                                      |

The tornado began 3 miles northwest of St. Anne in Kankakee county. The tornado developed just west of 6000E Road and tracked to the east, where it produced damage to a home and a garage along the road. At this location, a single family home collapsed upon itself, leaving it inhabitable. The garage sustained damage to its roof and exterior walls. The tornado was rated EF2 with winds estimated at around 113 mph.

The tornado continued to move to the east northeast, where it increased in intensity as it encountered yet another family home at the intersection of Route 1 and 4000S Road. This home and the garage/barn next to it sustained considerable damage, leaving the home inhabitable. The damage to the home consisted of all the walls collapsing, with all remaining debris from the house tossed to the northeast. The garage walls collapsed with the contents tossed to the east. Two four-wheelers and a four-door automobile inside the garage were lifted and flipped over as the tornado passed. Further north along Route 1, there was minor structural damage to a couple of homes and several trees uprooted. Damage at this location was rated EF3 with winds estimated at around 142 mph and a path width of 175 yards.

As this tornado continued to the northeast, it lost its intensity as it came across another residence at the intersection of 4000S Road and 8500E Road. Here, a house sustained partial damage to its roof with several surrounding trees having limbs sheared at the top. The tornado weakened at this point, and damage was rated EF1 with winds estimated at around 97 mph and a path width of 50 yards.

The tornado moved to the northeast through a wooded area, causing damage to many trees along its way. The more significant damage occurred near the intersection of 13000E Road and Gamble Road in the Hopkins Park area, where several healthy large hardwood tree tops were sheared or broken. Some homes were damaged by falling trees. The tornado continued to weaken and damage was rated EF1, with winds estimated at around 88 mph, and a path width of 50 yards. It was along 13000E Road where the tornado appeared to lift, with no other damage evident beyond this point.

| A line of thunderstorms moved east across the City of Chicago producing winds in excess of 60 mph. The City of Chicago Department of Streets and Sanitation received thousands of reports of trees and limbs blown down, and light poles blown down across the city. The worst of the storm of the damage occurred on the south side of the city. A man and a woman were injured by falling tree limbs on the south side of Chicago. A 21 year old woman was struck by a falling tree limb in the Beverly area. She was in the hospital for five weeks before succumbing to her injuries on July 23rd. |                    |                   |                     |                                |

| A line of thunderstorms moved east across the city of Chicago, producing wind gusts in excess of 60 mph. The department of Streets and Sanitation received thousands of reports of trees and limbs down, and light poles blown down, throughout the city. The worst of the storm hit the central and south parts of the city. In downtown Chicago, windows were blow out of the 25th, 28th and 29th floor of the Willis Tower (formerly Sears Tower). A building in Block 37 at State Street and Randolph had 35 windows damaged. Pieces of concrete were knocked off the Aon Center. |                    |                   |                     |                              |

In Matteson there was sporadic damage to commercial buildings across a half mile wide path along and south of Route 30 and Cicero Ave. Garage doors were blown in at a service station, and there was damage to roofs and HVAC units on roofs to a few buildings around the Lincoln Mall Shopping Center. There were a few trees blown down in a wooded area just southeast of the mall. Two semis were overturned on I-57 near Sauk Trail.

### COOK COUNTY --- 0.7 WNW MATTESON [41.51, -87.71], 0.9 NE PARK FOREST [41.49, -87.67]

|  |                    |  |       |                                       |

|  | 06/23/10 17:26 CST |  | 0.10M | Tornado (EF1, L: 2.42 mi , W: 200 yd) |
|  | 06/23/10 17:28 CST |  | 0     | Source: NWS Storm Survey              |

There was an intense narrow path of damage starting just southeast of the intersection of Lincoln Highway and Governors Highway. The concentrated path went from near Memorial Park to the train platform at Main Street and Hickory. In this neighborhood many large limbs were down and some trees were uprooted. A garage was destroyed and the roof of the train platform was damaged. Winds through this area were likely 90 to 105 mph, which is EF1 on the enhanced Fujita Scale. The path of the damage was from northwest to southeast, but many of the trees were blown from southwest to northeast, across the damage path. This indicated there was likely rotation. Several residents reported seeing rotation or a funnel cloud in this area. Lighter damage continued southeast of the railroad tracks near Wildwood Park and east to the Norwood Plaza at Western and 26th Street. It appears that the tornado dissipated in the forest preserve near 26th Street.

### KANKAKEE COUNTY --- 1.7 WSW KANKAKEE RIVER PK AR [41.21, -88.01]

## Storm Data and Unusual Weather Phenomena - June 2010

| Location   | Date/Time | Deaths & Injuries | Property & Crop Dmg | Event Type and Details |
|--|-----------|-------------------|---------------------|------------------------|
| <p>Numerous roads were flooded and closed in central Cook County. Interstate 55 was closed between Pulaski Road and Damen Avenue. Interstate 290 was closed between Des Plaines and Harlem Avenues. Basement and street flooding was reported city wide in Berwyn where 2.52 inches of rain fell in two hours. Almost every street in Western Springs had standing water with three to four feet of standing water on Hampton and Hillgrove Avenues. Several motorists were rescued from their cars after the cars were submerged in flood waters. A Western Springs fire truck stalled in flood waters and had to be towed. Widespread street and basement flooding was reported in Brookfield, Riverside, North Riverside, Forest Park and LaGrange.</p> |           |                   |                     |                        |

|  | 06/14/10 15:08 EST |  | 0.10M | Thunderstorm Wind (EG 87 kt) |
|  | 06/14/10 15:15 EST |  | 0     | Source: NWS Storm Survey     |

Severe winds of 60 mph to 75 mph developed just north of Boswell and continued east and southeast to the Warren County line south of Oxford. There were two areas of more intense wind damage found along Highway 352 between Boswell and Oxford. The first area of intense damage was near Chase where a large hardwood tree was snapped at the base with other trees and large tree limbs blown down in a few mile wide area around Chase. The most intense damage in this area was consistent with winds of 90 to 100 mph. The second area of intense damage was located farther east on Highway 352 just west of Oxford. A well built barn was partially destroyed in this location with debris from the barn spread several hundred yards down stream. Several trees were blown down in the area with some minor roof damage to a nearby home. The most intense damage was consistent with winds of 90 to 100 mph.

**A massive supercell developed over southern Benton County during the mid afternoon hours of June 14th. This storm produced grapefruit sized hail and wind speeds estimated to 100 mph. Thousands of acres of corn and other crops were destroyed.**
